

Assignment 6:

Included are the ArrayBag.java and BagInterface.java files. These do not need modification. Also included is a modified ArrayBagDemo.java file. For this assignment you are to modify the ArrayBagDemo.java file to recursively printout the contents of the string array in reverse order. So It should printout:

F E D C B A

You will need to modify the displayBag method to call a new method called reverseArray that you will add to the ArrayBagDemo class. This is the method that will recursively call itself printing out the strings in the array in reverse order.
