

## Assignment 9, Lab 8:

In the Lab 8 file, there are 3 sections: the first section is Pre-Lab work, this is on pages numbered 101 – 105; a Directed Lab Work section that is on pages 106 – 110; and a Post-Lab Follow-ups section that starts on page 111 and goes to the end of the document.

Your assignment is to work the Directed Lab Work section that is on pages 106 -110. There are two tasks you must complete. The first is modify the code files as specified and turn those into the dropbox on d2l. The second is to fill in the four comparisons tables in the lab sheets when you execute the runs that are specified. The sheets with the tables in them you will turn into me during class.

My recommendation is that you read the Pre-Lab section and answer those questions also, this will help with your understanding of how these sorting methods work. You do not need to turn in the Pre-Lab section.
